PROFILE

Frontend Engineer with 4+ years of experience building scalable, high-performance web applications using React.js, Next.js, TypeScript, and Redux Toolkit. Strong track record in SSR implementation, authentication flows, REST API integration, and reusable component architecture, with hands-on exposure to Node.js/Express, MongoDB, Firebase Firestore, and containerized (Docker) and cloud (Vercel/Netlify) deployment workflows. Improved page-load performance by 35% and perceived application speed by 50%+ across production and freelance projects.

SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, RTK Query
- **Backend (Working Knowledge):** Node.js, Express.js, REST API Design & Integration, JWT Authentication
- **Databases:** MongoDB, Firebase Firestore
- **Styling & UI:** Tailwind CSS, Material UI, Responsive Design
- **Deployment & DevOps:** Vercel, Netlify, Docker (containerized builds), Git, CI/CD
- **Performance & SEO:** SSR, SEO Optimization, Lazy Loading, Code Splitting
- **Testing & Tooling:** Cypress, Postman, Vite, Webpack
- **Cross-Platform:** React Native, Expo, Capacitor

WORK EXPERIENCE

Senior Frontend Engineer — VLink India Pvt Ltd

Gurugram, India | Jan 2026 – Aug 2026

- Owned frontend architecture and end-to-end delivery for production applications using React.js, Next.js, and TypeScript, defining folder structure, component boundaries, and shared UI/hook libraries used across 3+ feature teams.
- Migrated a legacy React.js (client-rendered) application to Next.js, restructuring pages into the file-based router and resolving hydration mismatches — cutting initial page load time by ~30% and eliminating recurring routing bugs.
- Refactored global state from scattered local state into Redux Toolkit slices with RTK Query, reducing redundant API calls by ~40% and simplifying loading/error handling across screens.
- Implemented authentication and route protection using JWT-based session handling, protected routes/middleware, and role-aware UI rendering, closing gaps that had previously allowed unauthorized route access.
- Improved Core Web Vitals through code splitting, dynamic imports, image optimization, and memoization (React.memo, useMemo/useCallback), raising average Lighthouse performance score from the ~60s into the 85–90+ range on key pages.
- Built and maintained reusable, typed UI components (forms, tables, modals, navigation) in TypeScript with Tailwind CSS, cutting duplicate styling code by roughly 25% and improving UI consistency across features.
- Shipped production releases 1–2 times weekly via CI/CD, reviewing pull requests and writing Cypress test coverage for critical flows, keeping post-release defect reports to a minimal, easily-patched level.

Freelance Frontend Developer — Self-Employed

Remote | Aug 2025 – Jan 2026

- Restructured a cluttered, AI-generated React project into a maintainable codebase and repaired end-to-end user flows, resolving the majority of reported bugs within the first two weeks.
- Introduced Redux state management and Node.js/Express-based API endpoints to support cleaner client-server data flow, reducing redundant re-renders and inconsistent UI state.
- Deployed builds via Vercel/Netlify and containerized services with Docker, cutting environment-setup time for new changes from hours to minutes.
- Improved perceived application speed by more than 50% through frontend and data-fetching optimizations, including memoization and reduced bundle size.

Engineer – Software Development — Codeblock Technologies Pvt. Ltd.

Noida (Sector 135), India | Nov 2022 – Aug 2025

- Built React.js and Next.js applications in TypeScript across multiple client projects, improving page-load performance by 35% across high-traffic flows through code splitting, lazy loading, and bundle-size optimization (Webpack/Vite).

- Independently designed and built 30+ reusable, lightweight components (forms, cards, tables, modals, navigation, breadcrumbs) using Tailwind CSS and vanilla CSS, published as a shared internal component set that cut new-feature development time by roughly 20%.
- Implemented SSR and static generation in Next.js and drove on-page SEO improvements (meta tags, structured data, semantic HTML, sitemap/robots configuration), improving crawlability and contributing to measurable gains in organic search visibility.
- Optimized images and assets (compression, responsive srcsets, lazy-loaded media), reducing average page weight by roughly 30–40% and improving Largest Contentful Paint on content-heavy pages.
- Wrote Cypress component and end-to-end tests for critical user flows and integrated them into CI/CD pipelines, cutting regression-related production bugs by an estimated 25%.
- Integrated REST APIs and MongoDB/Firebase-backed data sources to power dynamic, data-driven UI features, handling loading, error, and empty states consistently across the app.
- Used Git-based branching and PR workflows, participating in code reviews to maintain code quality and consistent TypeScript typing standards across the team.

Frontend Development Intern — Leads4Needs

India | Jan 2022 – Jun 2022

- Built responsive breadcrumbs, dialogs, drawers, and forms using React.js and JavaScript.
- Implemented smooth animations and interaction patterns while learning responsive frontend development practices.

Senior Process Associate — Genpact

Noida, India | Feb 2018 – Aug 2021

- Processed 18–22 medical, legal, auto, and liability claims daily, consistently meeting or exceeding daily throughput targets with strong attention to detail and process discipline.
- Reviewed case files and created accurate claims within 20–30-minute handling targets, maintaining a low error/rework rate across a high-volume caseload.

PROJECTS

Yobiz — B2C Retail Platform *(Present)*

- Developed and maintained a scalable, responsive B2C retail application using React.js, TypeScript, Tailwind CSS, and Redux Toolkit, with REST API and Android integrations, Cypress E2E testing, and CI/CD automation.
- Architected reusable, typed component patterns (product listings, filters, cart, checkout flows) to keep the codebase consistent and maintainable as the product surface grew.
- Optimized rendering performance and mobile responsiveness across device sizes, reducing layout shifts and improving usability on high-traffic retail pages.

Vitalic (LC / SPC / PIL) *(Present)*

- Modernized a legacy React application by migrating to Next.js with SSR, middleware-based authentication, and optimized routing; built interactive dashboards and real-time DOCX document workflows with dynamic data handling and MongoDB-backed persistence.
- Implemented SSR and metadata handling in Next.js to improve search-engine indexing, crawlability, and initial page-load speed across key application routes.
- Designed reusable dashboard widgets and data tables with client-side filtering, sorting, and pagination to handle large, dynamic datasets efficiently.

Imagineclick / Yoembryo *(Present)*

- Developed responsive, data-driven interfaces featuring real-time search, messaging, dynamic content, and reusable components using React.js, TypeScript, and Material UI.
- Built debounced, real-time search and filtering functionality backed by REST APIs to keep large result sets fast and responsive.
- Structured component and routing architecture for maintainability, enabling faster feature delivery as the application scope expanded.

EDUCATION

B.Sc (IT), HNBGU

Jul 2014 – Jul 2017

MERN Full-Stack Certification, DUCAT (Gurugram, Sector 14)

Apr 2022 – Oct 2022
